

Bariatric Products

A full line of products for all your Bariatric patient needs, including furniture, apparel, respiratory & more!

5 Reasons to Buy Your Bariatric Products from Medline:

1. Great Prices

As a manufacturer who sells direct, Medline provides aggressive pricing on a full line of products.

2. Flexible Financing Programs

Medline offers leasing, extended terms and consignment programs to help customers better manage their cash flow.

3. Higher Weight Capacities

Medline engineers and tests its bariatric products to provide the highest weight capacities available.

4. Faster Delivery

Our nationwide network of 29 distribution centers ensures rapid and frequent delivery so our customers can grow their sales and decrease their inventory.

5. Personal Service

Medline has more than 700 sales representatives across the country to provide prompt, responsive and knowledgeable service.

We guarantee everything we sell. Should you have any problem with a Medline product, please call us or speak to your Medline Sales Representative. We will take care of the problem right away, either by promptly exchanging the product or by crediting your account.

We're confident our Durable Medical Equipment will provide you with years of convenient, dependable service.

If you have questions about our products, call us at **1-800-MEDLINE (633-5463)**.

Medline's Bariatric Toilet Seat

The average toilet seat has a weight capacity of 250 lbs, is too small and cannot withstand the needs of a bariatric patient. Our bariatric toilet seat is wider and rated over 1,200 lbs. It is made from antimicrobial

plastic that is both stain and chemical resistant. It is designed to fit a standard toilet opening, either round or elongated toilet bowls.

Will Not Break— LIFETIME GUARANTEE

Wall-Mounted Toilet Support Jack

Wall-mounted toilets only have a 350 lb weight capacity and can pull away from the wall. The Toilet Support Jack increases the weight capacity of wall-mounted toilets to 1,000 lbs. It discreetly mounts under any manufactured wall-mounted

toilet, providing additional vertical support. It has a specially engineered extra-wide leg base that can be raised 2" for easy cleaning. The carriage and foot are made of the highest grade non-porous, chemical and stain-resistant rubber.

MPH08S1190132	Bariatric Stretcher	each

Digital Wheelchair Scale

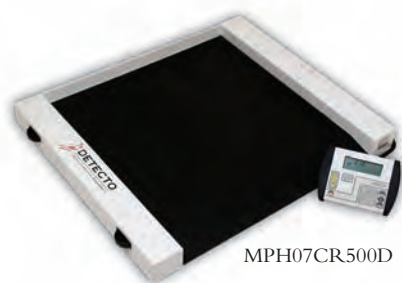

800 lb weight capacity

This versatile, digital scale makes weighing patients easy! It features a 28"x32" non-skid platform with ramp to accommodate wheelchairs, straight leg chairs and walk-on patients. Vertical fold-up feature, heavy-duty wheels, and battery operation make this sturdy, but lightweight scale easy to transport and store. Push-button readout eliminates the task of manual subtraction; scale is accurate to .2 lb.

MPH072241	Digital Wheelchair Scale	each

MPH07CR500D

Semi-Portable Wheelchair Scale

500 lb weight capacity

Weighing in at less than 100 lbs and featuring built-in handles and wheels, the "Roll-A-Weigh" can be moved wherever you need it. Designed for weighing on-the-move, this portable scale features a 758C digital weight indicator that can be mounted on the scale, or remotely on a wall or desk for convenient viewing. Heavy-duty construction, large safety plate platform with integral ramp, and the 500 or 1,000 lb capacity, make this the perfect scale for weighing patients in manual or power wheelchairs or on dialysis.

FEATURES: **Capacity 500 lb/225 kg/Graduations 0.2 lbs/.1kg**
 Platform Dimensions 32.5" L x 30.5" W x 1.5" H
 Display 7" high-contrast LCD for wall or table mount
 Power Source 6 "C" alkaline batteries

The New Remrest CPAP Line

The Remrest II demonstrates our commitment to advancements in CPAP technology.

Remrest II is engineered with an internal pressure transducer that provides real-time measurements to ensure that the prescribed pressure settings are always being delivered to the patient. The transducer will adjust the blower when a loss of pressure occurs due to resistance in the interface circuit or changes in altitude. This Dynamic Calibration feature can also be used to overcome the resistance inherent in nasal prong interfaces. Built in Auto Compliance feature monitors usage and provides an early identification which creates an opportunity for intervention in the event of a non-compliant patient. Remrest II also comes with a USB cord and software which allows usage information to be easily downloaded to check compliance.

Bariatric Overbed Table

In locked position, column supports 500 lb static load when evenly distributed over top surface

Why Do You Need a Bariatric Overbed Table? A standard overbed table is not strong enough to support the trunkweight of a bariatric patient and not long enough to reach beyond the middle of the bed.

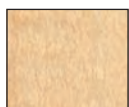

- Top—18" x 40" top reaches beyond the middle of the bariatric bed
- Frame—Structurally reinforced tubular steel frame. Opal powder coated base and column
- Casters— 2" twin wheel casters provide smooth maneuvering
- Height—30.5" - 45.5" with a strong positive lock in 1" increments
- Base—Extra-wide "H" base with 35" inside clearance to allow use with most bariatric chairs
- Specify laminate finish when ordering

Comfort Riser™ High-Low Bed

500 lb weight capacity

The Comfort Riser bed will comfortably accommodate all your residents. It is ideal for larger residents who require additional space. The bed features the high-low function from 7"-26" and a 500 lb weight capacity. The 360° degree caster system makes it very easy to reposition the bed for cleaning. Warranty: 2 years bumper-to-bumper and lifetime on frame.

Travels Straight Up and Down. No More Scratched or Gouged Walls!

Mattress stays at each corner to prevent slippage

ExpandaCare™ Transport Bed

1,000 lb weight capacity

The new ExpandaCare Bariatric Bed adjusts from its full mattress width of 60" to 37" in less than one minute. This allows it to pass through doorways and elevator entries as narrow as 40", resulting in fewer transfers and less chance of injury for both you and your patient. This is the only true transport bed with 1,000 lb capacity and adjustable width up to 54".

- Delivered with main frame assembled
- Accommodates lateral rotation mattresses up to 54"
- Single-button cardiac chair position and single button return to supine, for quicker patient access
- Single-button Trendelenberg operation without having the bed either full up or full down. Plus, you will never have to crawl under the bed to flip a Trendelenberg switch. It is emergency situation-ready
- Steer-lock and total casters positioned for safety, stability and easy maneuverability
- Optional scale system provides accurate patient weights at the touch of a button, no matter what position of the patient or the bed
- Optional trapeze

Item #	Description	Pkg

ExpandaCare Specifications

Weight Capacity

- 1,000 lbs

Overall Width

- 37" expandable to 60"

Overall Length

- 89"

Mattress Pan Dimensions

- Adjustable width 37", 39", 42", 48", 54"

Height—without mattress

- Lowest 16", Highest 30"

Functions

- Head/Fowler adjustable up to 70°
- Foot/Knee gatch adjustable up to 40°
- Bed Hi/Low adjustable up to 16°-30°
- Trendelenberg adjustable up to 12°
- Reverse trendelenberg adjustable up to 12°

Cardiac chair function, One-button function as follows:

Seat Up

- Raises fowler 82° to floor
- Raises knee gatch
- Raises bed head end
- Lowers bed foot end

Seat Down

- Lowers all functions to supine
- Bed height to lowest position

Options

- Trapeze, 3-way adjustable (side-to-side, up/down, head-to-foot)
- Built-in scales with range up to 1,000 lbs

Bariatric Low Air Loss Mattress System

This bariatric low air loss system is one of the most cost effective alternatives for skin protection and pressure sore prevention for larger patients. It features "true" low air loss technology and quietly circulates air through 16 individual cells. Air escapes from 33 air openings and is distributed equally across the top of the mattress surface, circulating under a vapor permeable cover to wick moisture away from the patient's skin. This mattress can be used on patients with any stage ischemic (pressure) ulcer, myocutaneous skin flaps, skin grafts and/or patients with temperature, moisture control or pain management issues.

700 lb weight capacity

- Available in 39", 42", 48" and 54" widths
- Reliable, whisper-quiet operation with low energy consumption
- Portable and lightweight
- User-friendly control panel run by a microprocessor
- Pulsation (alternating pressure) offered in three cycle settings that continually readjust to ensure patient comfort
- Firm mattress mode with timer helps facilitate nursing care
- Upright patient mode gives added support when higher elevation is required
- Quickset option allows you to input the patient's actual weight so you can preset pressure

Bed not included

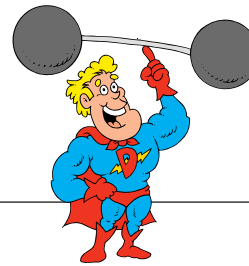

Item #	Description	Pkg

MDT24B42	42" Low Air Loss Mattress System	each
MDT24B48	48" Low Air Loss Mattress System	each
MDT24B54	54" Low Air Loss Mattress System	each

Bariatric Foam Mattresses

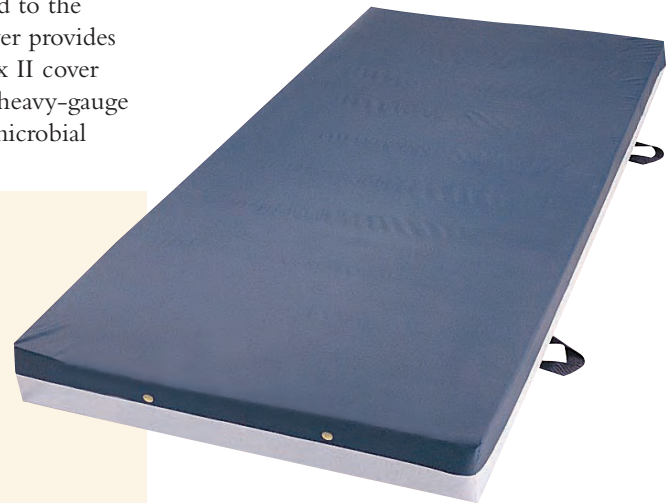

600 and 1,000 lb weight capacities

These three-layer foam mattresses help prevent the formation of pressure ulcers. The top layer of high-resiliency foam allows surface to mold to the patient's body. The middle layer adds firm support. The bottom layer provides proper orthopedic support and prevents bottoming out. The Nylex II cover is laminated for excellent stain and fluid resistance. The bottom is heavy-gauge vinyl for slip resistance. The ticking and foam are completely antimicrobial to prevent nosocomial infections and eliminate odors.

Item #	Description	Pkg

Durable Dan says,
"Medline mattresses feature innovative technologies to help reduce the formation of pressure ulcers."

Stage IV® 3,000 Bariatric Multi-Zoned Pressure Relief System

1,000 lb weight capacity

The Stage IV 3,000 has three pressure zones for maximum patient comfort and therapy. Ideal for patients with advanced stages of pressure wounds, the STAGE IV 3,000 offers more aggressive therapies by combining Pressure Relief and Patented Controlled Air Loss (C.A.L.™).

- Alternating Pressure and Controlled Air Loss in a single system
- 3 pressure zones; head, trunk and foot sections can be individually customized
- C.A.L. is the only low air loss patented to reach the patient's skin
- Alternating pressure relief to zero pressure
- Firm/transfer mode
- Air flotation mode
- Rapid deflation mode
- Digital displays of actual pressures
- Zippered, sealed system with 18 interchangeable air cells, 6.5" cell height
- Integrated 2" foam mattress below cells
- Automatic settings based on individual patient weight and height

Controlled Air Loss

Many competitive low air loss products use perforated mattress air cells. Medline's Stage IV and TheraTurn systems can provide C.A.L. without perforated air cells. Our patented process delivers improved air circulation to the patient to help prevent heat and moisture build-up on their skin. If necessary, the caregiver has the ability to turn off the C.A.L. therapy with one touch of the control pad. Best of all, our C.A.L. therapy can be altered independently of the Alternating Pressure Therapy. Because the air cells of our Stage IV and TheraTurn products are not perforated, they remain fully inflated during patient transport or in case of a power outage.

Advanced Design

Advanced technology provides improved therapy and ease of operation. Our Patented C.A.L. delivers improved air circulation to the patient, reducing heat and moisture build-up on their skin to help prevent tissue breakdown. The use of superior materials in our mattress coverlets also helps reduce the risk of skin shear. Our whisper-quiet air pumps provide the proper therapy while maintaining a pleasant healing environment.

State-of-the-art electronics ensure that the selected pressure therapy is delivered to the patient. The use of alternating inflated and deflated cells provides our pressure therapy. As cells are deflated, pressure reduces to zero in those areas, while support of the patient is maintained by inflating alternating cells.

In the event of power failure, air is "locked" in our inflated cells for up to 24 hours, providing greater patient safety. Most competitive products use perforated air cells, which will deflate when power is lost.

MDTMSENTTPLUS

MDS495DV

MDS305XL

Medline Synchro™ Compression System

The Synchro pump works with “intelligent” connectors located on our garments. These connectors synchronize the pump to provide the proper sequential compression therapy. This eliminates the knobs and pressure adjustments found on competitive pumps and garments.

The Synchro pump also recognizes when only one garment is attached, automatically adjusting the therapy. This eliminates the need to use a full pair of garments or a “plug” for unilateral applications. Our advanced technology makes the Synchro system extremely flexible and simple to use.

Greater Comfort Helps to Increase Patient Compliance

The Synchro compression garments are finished inside and out with a soft velour fabric, which provides increased patient comfort. Our two-piece, thigh-length garment eliminates material from around the knee, allowing for greater air flow to the area and more comfortable knee flexion.

Our foot compression system works sequentially with a soft massaging action. Many patients find our therapy more comfortable than competitive models using high-pressure foot compressions.

Item #	Description	Pkg
MDS305XL	DVT Sequential Compression Garment XL Thigh	12/pr
MDS495DV	Synchro DVT Sequential Pump	each

Synchro Pump Features

Silent pump

Reduces noise level in room, especially at night

Small and lightweight

Easy to handle, store and locate in patient’s room

Full alarm system

Alerts staff to possible faults which may affect system use, such as power failure, kinked tubing, etc.

Back-lit display

Allows staff to see control panel without turning on room lights

Automatic pressure

Unique color-coded connector plugs allow power unit to detect specific garment style and set pressures to proper ranges

Comfort selector

Allows staff to make minor pressure adjustments within proper ranges to provide additional patient comfort when using leg garments

Data log

Internal memory keeps track of usage hours for biomedical review and service. Also may be used to program or retrieve special information

Universal system

Allows use of the three most popular types of pneumatic compression garments (thigh, calf, foot) using only one pump

Synchro Garment Features

Synchro deluxe velour garments

Our single-patient use garments are made with PVC, but covered inside and out with soft velour fabric, reducing heat and perspiration against the skin, increasing patient comfort.

Universal sizing

The velour covering allows nearly universal sizing, reducing inventory from six sizes to two.

Two-piece thigh garment

This unique style allows complete freedom of movement without a plastic panel behind the knee. This allows more air circulation and increased patient comfort. The two-piece design is also easier for nursing staff to apply.

Medline's Single-Use Cuffs

The cuffs are made from a soft, comfortable woven polyester fabric in clean hospital white. Each cuff has rounded corners and finished edges for optimal patient comfort. Genuine Velcro® closures ensure a lasting and snug fit for every patient. Cuffs come in a wide range of infant to adult sizes, each color-coded for convenience. A complete line of connectors and adapters connect cuffs to virtually every non-invasive blood pressure monitor. All sizes meet the American Heart Association recommendations for accuracy.
