

Quality Control of Our CDS is All Under One Roof.

The entire CDS manufacturing process takes place under one roof, in our 240,000 square-foot facility designed exclusively for producing sterile procedure trays and Complete Delivery Systems. From our class 10,000 clean room to our dedicated CDS manufacturing area, Medline maintains a level of quality that you simply will not find anywhere else in the industry.

Labor & Delivery is just one of the areas that can benefit from CDS. Many procedures performed in your O.R. can be simplified as well. For hospitals that need to reduce expenses,

lower inventory costs and streamline logistics, CDS makes perfect sense. CDS controls costs and improves efficiencies in every step of the supply chain. For more information, and a no-obligation analysis, contact your Medline representative or call us at 1-800-MEDLINE.

Be Prepared With Latex-Free CDS.

In an emergency situation, it can be difficult to determine if a patient is sensitive to latex. And it can be just as challenging to find documented latex-free supplies. With Medline's latex-free Complete Delivery System (CDS), we offer peace of mind—five "stock" procedures that contain 100% latex-free components. For more information, contact your Medline representative or call us at 1-800-MEDLINE

Simplify

Your patients may not believe it, but thanks to Medline, labor and delivery just got a little easier. With our Labor & Delivery Complete Delivery System (CDS), we put all your sterile and non-sterile supplies used for a standard delivery into one container. It's everything you use today. Same vendors. Same item numbers. Just put together by Medline and delivered to your facility in one container.

If it sounds simple, that's because it is. But the benefits are many. Inventory costs are lowered. Ordering is simplified. Set-up is faster. Costs are captured. In general, the entire process from getting the supplies to disposing of them is easier with a Labor & Delivery CDS from Medline.

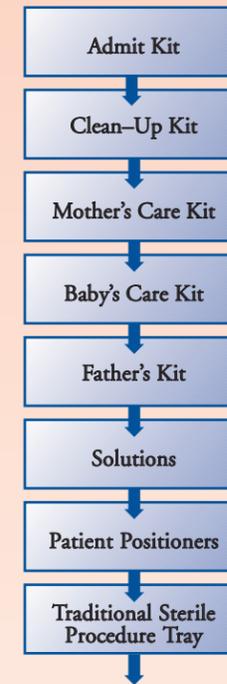

With a Labor & Delivery CDS From Medline

“Our staff in Labor and Delivery recently changed to the Complete Delivery System from Medline...

We were very hesitant at first because change is hard, but have found that this fits our needs perfectly. It is so nice to only pull one pack and have everything at our fingertips, especially in an emergency. This allows us more time with our patients—where we are needed most. It has also proven to be a significant cost savings. I would highly recommend the Complete Delivery System to every Labor and Delivery unit.”

Beth Hedrick, RN
Director Maternal/Child Unit
Osceola Regional Medical Center
Kissimmee, Florida

Whether it comes in our standard white box, “Baby’s First Toy Chest,” or another container of your choice, a CDS contains all disposable supplies (sterile and non-sterile) for a single procedure.

CDS Container is Also “Baby’s First Toy Chest.”

Medline’s Labor & Delivery CDS can be custom-packed in our “Baby’s First Toy Chest” container, a rugged, hard plastic container with easy-to-grip handles and a detachable lid. Not only is this container a great way to package the CDS, it makes a great gift for new parents.

Informative Reports Help You Monitor Results.

How much does a labor & delivery procedure really cost your facility? How much does the cost vary from one surgeon to the next? These are just some of the questions that you’ll have answered with our CDS utilization reports.

For more information about how you can participate in this free program, contact your Medline representative or call us at 1-800-MEDLINE.
