

New!

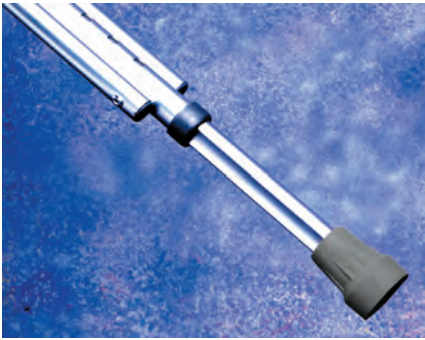

Introducing Medline's New Aluminum Crutches with a 300 lb. Weight Capacity.

Support more of your patients with our NEW Aluminum Crutches!

Medline's new Generation V crutch helps health care facilities of all types safely and more cost effectively care for heavier patients.

Until now, Medline and others in the industry only offered standard crutches that accommodated up to 250 lbs. For heavier patients, facilities had to use bariatric crutches, which are much less cost effective and more cumbersome for patients. For the typical hospital, approximately 7% of its crutch usage is bariatric at a cost of almost 6 times the cost of a standard pair of crutches.

By modifying the manufacturing process to increase the hardness and strength of the aluminum tubing, Medline is now able to offer facilities standard crutches that safely support over 97% of a typical facility's population.

Key Features of Medline's New Crutches

- **300 lb. weight capacity**
- **Patented I-Beam construction** on the center post limits foot piece rotation, making it easier to adjust the height of the crutch
- I-Beam construction provides greater strength than traditional round tubes to resist breaking in the most vulnerable part of the crutch, the center tube.

Crutch Description	Weight Capacity	Latex Free	Pairs Per Case	Product Number
Adult Tall	300 lb.	No	8 pr/cs	MDSV80534
Adult Tall	300 lb.	Yes	8 pr/cs	MDSV80534LF
Adult Tall	300 lb.	No	1 pr/cs	MDS80534HW
Adult Medium	300 lb.	No	8 pr/cs	MDSV80535
