

## BEDS

### Alterra 1232 Bed

#### Safety and comfort for the resident

- Smooth, quiet performance. Four ultra-quiet, dependable DC motors power the Alterra 1232 and offer a multitude of comfortable positioning options. Two motors power the bed's height, and one operates its knee hinge. The fourth motor drives the bed's reclining head deck, allowing residents to find the perfect position for watching TV, reading, socializing – or just resting!
- Unique grid/rib deck for enhanced comfort. The deck of the Alterra 1232 is a thoughtfully designed combination grid/rib style, making it both strong and comfortable.

#### Ease of use for the caregiver

- Built-in safety features for peace of mind. A safety-stop feature helps reduce the risk of serious injury should a hand or other body part become caught between the bed frame and surface. A second safety feature is the bed's low height of 7.25", making it an ideal bed for Alzheimer's patients and any other resident at risk of falling. Finally, battery backup keeps the bed functioning in the event of a power outage.
- Minimize the risk of back injury during resident care. The Alterra 1232's maximum height of 26" makes it easy to care for residents while helping to reduce the risk of back injuries. Plus, the bed moves from its lowest to highest height within 47 seconds and without any horizontal movement, eliminating wall damage!

Height range	7.25" - 26"
Bed deck dimensions	80" long, 34.5" wide
Overall length	87.5"
Weight capacity	450 lbs
Movement styles	Head, knee hinge, high/low
Deck style	Combination grid/rib
Rolling position	Move at any height
Motors	4 DC
Casters	8 total, 4 locking
Accessories	Head/foot boards, head and foot section half-length side rails, mattress slide stops
Warranty information	Electrical components – 2 years. Bed frame – 10 years. Welds – lifetime warranty.

All eight casters rotate a full 360 degrees, increasing maneuverability even in tight spaces. For extra safety, four of the eight casters lock into place.

The placement of the Alterra 1232's power cord helps prevent cord pinching and chance of electric shock.

Slide stops keep the mattress in place for safer transfer in and out of bed.

The Alterra 1232's wall guard is placed near the head section to prevent wall damage.

## Alterra 1232 Bed - Ordering Information

FCE1232RSRF	Half-length foot section side rails	pair
FCE1232AB	Assist bar	ea

### Helpful Hint

Hi-Low beds help address the concerns of fall-risk patients and caregiver injury. Typical high height of 23" or more makes it easy to take care for residents while helping to reduce the risk of caregiver back injuries. A low height of 8" or less reduces the risk of injury from a fall for the residents.

## Model 1202 Full Electric Bed

Medline Model 1202 Bed is a strong, well built, low maintenance, electric bed suitable for the majority of residents in a long term care facility.
